

XL-2

NOTE: Owner's manual not to be removed by anyone but the occupant.

Owner's Manual

INTRODUCTION

Congratulations on your decision to protect your home or business with the XL-2 series security system. You have chosen a reliable, state of the art security system that is remarkably easy to operate. Your system has been professionally installed by your local Security Company who can explain the specifics of your system within your location.

The keypad is the arming station for your security system. These are available keypads for your system:

XL4600RM Metal plate keypad containing indicator lights for each of the 12 zones (areas of protection). This keypad can be flush mounted into your wall or surface mounted in a back box.

XL 4600SM A surface mount keypad with 12 LEDs for monitoring zone status.

6615 Keypad with a plastic case and with indicator lights to show the status of each of the zones. The zone indicator lights are located behind the plastic sliding door of the keypad (left hand side). NOTE: This keypad displays zone status indication lights for 16 zones.

6805 Keypad with a plastic case and a two line LCD (liquid crystal display) with a two line readout.

Please identify the keypad(s) present on your system from the diagrams shown in the sections that follow.

The XL-2 is the Residential version of the which has been Listed by Underwriters Laboratories for Household Fire and Burglary applications.

The model XL-2B is the Commercial Burglary configuration of the control panel and has been Listed by Underwriters Laboratories for Commercial Burglary applications.

1. KEYPAD LAYOUT

The keypad is the arming station for the XL-2 security systems. Four different versions are available: a metal plate flush mounted version (XL4600RM), plastic cased surface mount versions (XL4600SM or 6615), and an LCD (liquid crystal display) version containing a two line readout (6805). The keypads have the following appearance and contain the following items:

6615 LED Keypad

6805 LCD Keypad

XL4600RM Keypad

XL4600SM Keypad

1) ZONE STATUS INDICATORS - displays zone status as follows:

ALARM:	Fast Blink,
BYPASS:	Low Blink/Low Intensity,
TROUBLE:	Slow Pulse
NOT READY:	Solid On

2) ARM/DISARM INDICATOR Indicates system is armed or disarmed. A blue LED indicates communication failure with the central station.

3) STAY- Indicates the system is armed with the interior zones bypassed.

4) INSTANT - Indicates system is ARMED with all delay zones instant.

5) AC/LOW BATTERY - Indicates system is running on AC (ON) or backup battery (OFF).

6) READY Indicates whether the system is ready for arming.

7) NUMERICAL KEYPAD operates in a similar manner to a calculator or telephone with the digits 0 - 9 and * # clearly marked.

8) DISPLAY AREA - This section of the LCD keypad displays the current system status in this two line by sixteen character display. The second line of this display can be programmed by your installer to contain customized descriptors for the areas of protection within your location.

NOTES:

FIRE ALARM-Audible and Visual Indicators.

On LED type keypads the programmed fire zone LED and the ARM LED will blink fast to indicate a fire alarm. On LCD type keypads, the word "ALARM" will flash on the display area. The sounder in the keypad will pulse ON and OFF following the bell or siren output.

READY LED/READY MESSAGE

A FLASHING ready LED or the words "PROGRAMMING MODE STANDBY" indicate that the unit is in the installer programming mode. The Fire and Burglary initiating circuits are disabled while in this mode. Contact your installation company if mode persists.

SOUNDER

The Sounder in the keypad beeps whenever the keypad keys are depressed. The sounder also beeps on pre-alarm EVERY TIME as a reminder to disarm the system. The sounder will produce fast beeps when a complete message is sent to the central station. It is extremely important that care be used when arming the system because if the system is NOT READY and the user code is entered, the keypad will beep as a negative acknowledge.

FIRE PROTECTION

Fire conditions are always given priority.

Throughout this users manual the following conventions are used to display the keystrokes required to perform the functions.

BYPASS	Key labeled BYPASS on keypad.
INSTANT	Key labeled INSTANT on keypad.
STAY	Key labeled STAY on keypad.
CODE	Key labeled CODE on keypad
[USER]	Four digit user code.

2. ARMING THE SYSTEM

ARMING the system activates the Security System. Arming can only be performed if all zones are READY. For example, if a protected door is open, the system cannot be armed.

SYSTEM READY

The system is ready to be armed if the READY indicator light ON. On LCD keypads the following display will appear:

SYSTEM READY

If the system is ready, ARMING can be performed as follows;

ARMING PROCEDURE:

Enter your four digit user code into the keypad: [USER]

The ARMED indicator light will now be lit and if you are leaving the home you may exit through a door designated by your installer as an exit/entry zone for a fixed time period known as the exit delay.

Entry/exit times: ENTRY: _____ EXIT: _____ seconds

LCD keypads will display the following message;

ON AWAY

NOTE: The system can be armed without the backup battery being connected.

SYSTEM NOT READY

If the system is not ready to be armed the READY indicator will be OFF. On LED based keypads the zone indicator lights will display the zones which are currently not ready. The condition of each zone indicator reflects what the status of each zone as follows:

ALARM:	Fast blinking.
BYPASS:	Slow blinking low intensity.
TROUBLE:	Slow pulse
NOT READY:	Solid ON

The LCD keypad a display will appear indicating that the system is not ready followed by displays showing the zone number and description of the zone or zones which are not ready.

For example:

SYSTEM NOT READY

NOT RDY ZN 01
FRONT DOOR

In this example, the front door is not ready (Zone 1). To make the system ready determine which zones are not ready by observing the zone indicator lights, or the display section of the LCD keypad. From the zone number you can find out which area of protection is not ready.

For example, if Zone 1 is not ready it might mean a window is open. Once the problems with each zone has been resolved the READY light will appear and the system can be armed.

To ARM the system when the system is NOT READY:

- Determine which zones are not ready and perform what is necessary to ready the zone(s) (example, close window, etc.), or
- Bypass the zone(s) not ready. Bypassing should only be performed if the zone cannot be made ready or intentionally will remain not ready. Zones that are bypassed are **not** protected when the system is armed.

3. DISARMING

Disarming the security system will deactivate the burglary portions of the system. This procedure can also be used to reset your system if you accidentally set off the system (example, opened a window while the system was armed, or excessive amount of smoke activated fire protection system).

DISARM PROCEDURE:

[USER]

Enter your user code.

IF NO ALARMS HAVE TAKEN PLACE

Upon disarming the ARMING indicator will go off. The system display the current status. LCD keypads display the SYSTEM READY message.

IF ALARMS HAVE TAKEN PLACE

If alarms or other conditions such as system troubles have taken place since the initial system arming, they will appear on the display. The conditions that have occurred appear in the zone display section of the keypad. LCD keypads will reflect the current system status through the indicator lights as follows;

ALARM	Fast blinking.
BYPASS	Slow blinking low intensity.
TROUBLE	Slow pulse
NOT READY	Solid ON

Burglary alarms will be indicated with a STEADY sound through the keypad while FIRE alarms will generate a pulsing sound.

LCD keypads will show the alarm conditions with a display as follows:

```
ALARM   ZN 01
FRONT DOOR
```

This display shows the zones in alarm. After entry of your four digit user code the following display will appear:

```
ALARM MEM   ZN 01
FRONT DOOR
```

IMPORTANT: If an intrusion has taken place while you were away, do not enter until the location has been secured!!!. Call for help from a neighbor's house. Wait for the police!

- To clear the display of the alarm or trouble conditions and silence the audible signal enter [USER] again.

4. STAY

The STAY mode is another way to ARM your system while you remain in the location. The STAY mode will deactivate any interior protection zones which means that you will be free to walk throughout your location without activating the alarm system.

In order to enter the STAY mode, the system must be READY. (see previous description).

STAY PROCEDURE:

STAY [USER]

Depress the STAY key followed by your user code. After a successful STAY arming the ARMED indicator will be lit. In addition, on LED keypads the STAY indicator will be lit.

In LCD keypads the following display will appear;

ON: STAY

In the STAY mode only the external or perimeter burglary protection is active. You are free to walk around the residence without activating any of the interior protection zones.

- Remember, you must DISARM the system to when you want to leave the premise.

Note: The STAY option will automatically be reset after the system is disarmed.

5. INSTANT

The INSTANT mode arms the system and eliminates the entry time delay interval. This mode could be used if anyone enters through an entry/exit zone the alarm system will instantly activate.

The system must be ready to select the INSTANT option.

INSTANT PROCEDURE:

INSTANT [USER]

Depress the INSTANT key followed by your user code.

Upon successful INSTANT ARMING of the system the ARMED indicator will be lit. In addition, on LED keypads the instant indicator will be ON.

LCD keypads will contain the following message;

ON:INSTANT

Note: The INSTANT option will automatically be reset after the system is disarmed.

6. INSTANT - STAY

In INSTANT STAY mode, the system is armed, the interior portions bypassed, and entry delay is suspended. The system must be READY to enter this mode.

INSTANT-STAY PROCEDURE:

INSTANT STAY [USER] or STAY INSTANT [USER]

Depress the INSTANT and STAY keys and then your user code. After a successful INSTANT STAY arming the ARMED indicator will be lit. In addition, on LED keypads both the INSTANT and STAY lights will be on.

LCD keypads will contain the following message;

ON:STAY INSTANT

7. BYPASS

Bypasses are performed to eliminate burglary zones that are not ready or faulty from activating the security system.

BYPASS PROCEDURE:

BYPASS [USER] ZN

Depress the BYPASS key. Enter your user code and zone number (1-6) to be bypassed.

Example: BYPASS [USER] 2 bypasses zone 2

NOTE: Zones that are BYPASSED are NOT protected when the system is armed.

If the zone has already been bypassed, the sequence will unbypass the zone except if the system is armed and the unbypassed zone is still not ready. Unbypass means that the zone returns as an active burglary zone. After the bypass (or unbypass) command has been accepted the unit will emit a continuous beep and zones that have been bypassed will appear in a slow blinking mode in the zone status area on LED keypads. LCD keypads will display the zone bypasses as a secondary display after the SYSTEM READY or SYSTEM NOT READY as shown below:

BYPASS ZN 01
FRONT DOOR

If multiple zones are bypassed then more than one display will appear. NOTE: Temporary users (i.e. babysitter, housekeeper) should NOT be shown the BYPASS procedure.

If multiple zones are bypassed then more than one display will appear. NOTE: Temporary users (i.e. babysitter, housekeeper) should NOT be shown the BYPASS procedure.

8. UNBYPASS

The UNBYPASS function removes an existing bypass from a currently bypassed zone. After UNBYPASSING a zone, the bypass indication will be removed for that zone on either the LCD or LED keypad.

The procedure is similar to a bypass.

UNBYPASS PROCEDURE:

BYPASS [USER] ZN

See bypass description.

9. USER DEFINITION

Users can be entered or modified directly through the keypad. The security system can have up to six different users. User #1 is known as the master user and is the only user allowed to modify other users.

USER DEFINITION PROCEDURE:

CODE [USER] [US#] [USERID]

where;

CODE is the CODE key on the keypad

[USER] is the master user code (four digits) [USER #1].

[US#] is the User number (1-6)*

[ID] is the New user ID (0000 - 9999).

Note: (*) If ambush has been enabled by your installing company then user #6 will be the ambush code. If an arming only code (maid code) has been defined by your installer then user #5 can only arm the system.

Example: To create user number 3, with a user access code of 1056 (assume a master user code of 7492), enter; CODE 7492 3 1056 NOTE: Do not use codes that may be simple to decode ie. 1111 or 1234.

- Any error detected during the USER definition process will cause the keypad to beep rapidly four times. If an error is detected retry the entire command.

10. USER DELETION

Removal of users from the panel can be performed as follows;

USER DELETION PROCEDURE:

CODE [USER] [User #] *

Where:

CODE is the CODE key on the keypad

[USER] is the Master user code

[User #] Represents the user number being deleted (2-6). Note: User number 1 cannot be deleted.

* is the * key from the keypad.

11. KEYPAD AUXILIARY CONDITIONS

The system can also initiate three separate AUXILIARY conditions directly through the keypad. These conditions must be activated by your installer and can be initiated through simultaneous depression of two keys as follows:

DESCRIPTION	KEYSTROKES
Panic	* #
Fire	7 9
Aux.	1 3

For example, send a keypad panic by pressing the * and # keys simultaneously. Ask your alarm installer about how this pertains to your system.

The XL4600SM keypad has keys for specially defined auxiliary functions. These functions are activated by **simultaneously** depressing two keys. These special auxilliary keys are located below the function keys. NOTE: Consult your installer to determine the auxiliary functions of your system.

12. DURESS

The system can send an emergency signal to the Central Station if you are forced to enter the premise. This feature can be programmed by your installer. If active, then user code #6 is the ambush code.

13. ARM-ONLY (MAID) CODE

If selected by your installer, this permits user code #5 to only arm the system. This would allow a temporary user to activate the security system as they leave.

14. QUICK ARMING

If selected by your installer, QUICK ARMING arms the system without entering a user code. Entering # 1 activates your system. NOTE: System disarming requires entry of a valid user code.

15. QUICK FORCED ARMING

QUICK FORCED ARMING arms the system by pressing the # key followed by 2 and bypasses any burglary zones which are not ready. NOTE: System disarming will still require entry of a valid user code. NOTE: This feature is disabled on UL installations.

16. INSTALLATION LAYOUT

Early warning fire detection is best achieved by the installation of fire detection equipment the location as follows;

Typical Smoke Detector Layout (Proposed)

In homes with more than one sleeping area a smoke detector should be provided to protect each area.

Smoke detector shall be located between the sleeping area and the rest of the house.

NOTES:

1. Designates smoke detectors.
2. Refer to N.F.P.A. #74 Appendix B-1.1 thru B-10.

Preparation of an evacuation plan is of prime importance in fire prevention. Establish a household emergency evacuation plan in the event of fire.

- 1- Evaluate possible escape routes from your home.
- 2- Select 2 escape routes from each room.
- 3- Rooms on the second floor should have a rope ladder. Be sure it will reach the ground.
- 4- Draw a rough sketch of your escape plan so everyone is familiar with it.
- 5- Practice your escape plan to assure that everyone knows what to do.
- 6- Establish a meeting place outside where your family is to report. Once you have evacuated the house do not return to a burning house.
- 7- Advise the local fire authority that you have installed a fire alarm system.
8. When the fire alarm signals, LEAVE IMMEDIATELY. Do not stop for belongings.
9. If a fire occurs, test the door. If hot, use your alternate route. If the door is cool, brace your shoulder against it and open it cautiously. Shut the door to help prevent the fire and smoke from spreading. Crawl through smoke, holding your breath.
10. Contact the Fire Department from a neighbor's telephone.
- 11 Everyone including neighbors should be familiar with the Fire and Burglary signals.

In this installation the Fire Alarm signal is _____

The Burglary Alarm signal is _____ .

17. SYSTEM TESTING

This control unit was manufactured under rigid quality standards and complies with all UL requirements for its intended use. Maintenance is best performed by your installing company with trained service personnel.

Installing Company: _____
Telephone Number: _____

Test your system once a week using the following procedure:

Note: If your system is monitored by a Central Station then contact them prior to performing this test.

- 1- Arm your security system.
- 2- Activate the system by opening a zone (example, window, or door).
- 3- Confirm that the alarm sounding device (bell or siren) activates. If your system is connected to a Central Station then the keypad will emit a ringback sound to confirm that the signal was received.
- 4- Disarm the system to silence the system and return to normal status.

BATTERY TEST

In order to test the backup battery the following procedure should be performed;

- 1- Remove the AC transformer from the AC outlet by removing the restraining screw which secures the transformer to the wall. (Note: the screw is not present in models sold in Canada).
- 2- Observe that the AC light goes off on the keypad.
- 3- Activate your alarm system using steps 1-4 listed above.
- 4- Replace the AC transformer to the AC outlet and secure using the retaining screw (Note: The retaining screw is not present in models sold in Canada).

The National Fire Protection Association publishes a standard for household fire warning equipment. N.F.P.A. #74. Further information can be obtained by contacting; NFPA Public Affairs Dept., Batterymarch Park, Quincy, MA 02269.

If you have any further questions about the operation of your system, call your installer.

FEDERAL COMMUNICATIONS COMMISSION (FCC) STATEMENT

This equipment has been tested to FCC requirements and has been found acceptable for use. The FCC requires the following statement for your information.

This equipment generates and uses radio frequency energy and if not installed and used properly, that is in strict accordance with the manufacturer's instructions may cause interference to radio and television reception. It has been tested and found to comply with the limits of Part 15 of FCC Rules, which are designed to provide reasonable protection against such interference in a residential installation. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does not cause interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures: If using an indoor antenna, have a quality outdoor antenna installed.

- Reorient the receiving antenna until interference is reduced or eliminated.
- Move the radio or television receiver away from the control/communicator.
- Move the antenna leads away from any wire runs to the control/communicator.
- Plug the control/communicator into a different outlet so that it and the radio or television receiver are on different branch circuits.

If necessary, the user should consult the dealer or an experienced radio/television technician for additional suggestions.

The user may find the following booklet prepared by the Federal Communications Commission helpful: "Interference Handbook"

This booklet is available from the U.S. Government Printing Office, Washington, DC 20402. Stock No. 004-000-00450-7.

The user shall not make any changes or modifications to the equipment unless authorized by the installation Instructions or User's Manual. Unauthorized changes or modifications could void the user's authority to operate the equipment.

IN THE EVENT OF TELEPHONE OPERATIONAL PROBLEMS

In the event of telephone operational problems, disconnect the communicator by removing the plug from the RJ31X jack. Do not disconnect the phone connection inside the communicator. Doing so will result in the loss of the phone works correctly after the communicator has been disconnected from the phone lines, the communicator has a problem and should be returned for repair.

If upon disconnecting the communicator, there is still a problem on your line, notify the telephone company that they have a problem and request prompt repair service. The user may not under any circumstances (in or out of warranty) attempt any service or repairs on the system. It must be returned to the factory or an authorized service agency for all repairs.

WARNING LIMITATIONS OF THIS ALARM SYSTEM

While this system is an advanced design security system, it does not offer guaranteed protection against burglary, fire or other emergency. Any alarm system, whether commercial or residential, is subject to compromise or failure to warn for a variety of reasons. For example:

- Intruders may gain access through unprotected openings or have the technical sophistication to bypass an alarm sensor or disconnect an alarm warning device.
- Intrusion detectors (e.g., passive infrared detectors), smoke detectors, and many other sensing devices will not work without power. Battery operated devices will not work without batteries, with dead batteries or if the batteries are not put in properly. Devices powered solely by AC will not work if their AC power supply is cut off for any reason, however briefly.
- Signals sent by wireless transmitters may be blocked or reflected by metal before they reach the alarm receiver. Even if the signal path has been recently checked during a weekly test, blockage can occur if a metal object is moved into the path.
- A user may not be able to reach a panic or emergency button quickly enough.
- While smoke detectors have played a key role in reducing residential fire deaths in the United States, they may not activate or provide early warning for a variety of reasons in as many as 35% of all fires, according to data published by the Federal Emergency Management Agency. Some of the reasons smoke detectors used in conjunction with this System may not work are as follows: Smoke detectors may have been improperly installed and positioned. Smoke detectors may not sense fires that start where smoke cannot reach the detectors, such as in chimneys, in walls, or roofs, or on the other side of closed doors. Smoke detectors may not sense a fire on another level of a residence or building. A second floor detector, for example, may not sense a first floor or basement fire. Moreover, smoke detectors have sensing limitations. No smoke detector can sense every kind of fire every time. In general, detectors may not always warn about fires caused by carelessness and safety hazards like smoking in bed, violent explosions, escaping gas, improper storage of flammable materials, overloaded electrical circuits, children playing with matches, or arson. Depending on the nature of the fire and/or the location of the smoke detectors, the detector, even if it operates as anticipated, may not provide sufficient warning to allow all occupants to escape in time to prevent injury or death.
- Passive Infrared Motion Detectors can only detect intrusion within the designed ranges as diagramed in their installation manual. Passive Infrared Detectors do not provide volumetric area protection. They do create multiple beams of protection, and intrusion can only be detected in unobstructed areas covered by the beams. They cannot detect motion or intrusion that takes place behind walls, ceilings, floors, closed doors, glass partitions, glass doors, or window. Mechanical tampering, masking, painting, or spraying of any material on the mirrors, windows or any part of the optical system can reduce their detection ability. Passive Infrared Detectors sense changes in temperature; however, as the ambient temperature of

the protected area approaches the temperature range of 90 to 150F, the detection performance can decrease.

- Alarm warning devices such as sirens, bells or horns may not alert people or wake up sleepers who are located on the other side of closed or partly open doors. If warning devices sound on a different level of the residence from the bedrooms, then they are less likely to waken or alert people inside the bedrooms. Even persons who are awake may not hear the warning if the alarm is muffled by noise from a stereo, radio, air conditioner or other appliances, or by passing traffic. Finally, alarm warning devices, however loud, may not warn hearing-impaired people or waken deep sleepers.
- Telephone lines needed to transmit alarm signals from a premises to a central monitoring station may be out of service or temporarily out of service. Telephone lines are also subject to compromise by sophisticated intruders.
- Even if the system responds to the emergency as intended, however, occupants may have insufficient time to protect themselves from the emergency situation. In the case of a monitored alarm system, authorities may not respond appropriately.
- This equipment, like other electrical devices, is subject to component failure. Even though this equipment is designed to last as long as 10 years, the electronic components could fail at any time.
- The most common cause of an alarm system not functioning when an intrusion or fire occurs is inadequate maintenance. This alarm system should be tested weekly to make sure all sensors are working properly.

Installing an alarm system may make one eligible for lower insurance rates, but an alarm system is not a substitute for insurance. Homeowners, property owners and renters should continue to act prudently in protecting themselves and continue to insure their lives and property.

We continue to develop new and improved protection devices. Users of alarm systems owe it to themselves and their loved ones to learn about these developments.

FIRE BURGLARY INSTRUMENTS, INC. ONE YEAR LIMITED WARRANTY

Fire Burglary Instruments, Inc., a subsidiary of Pittway Corporation, and Pittway Corporation its divisions subsidiaries and affiliates ("Seller"), 149 Eilen Way, Syosset New York 11791, warrants its security equipment ("the product") to be free from defects in materials and workmanship for one year from the date of original purchase, under normal use and service. Seller's obligation is limited to repairing or replacing, at its option, free of charge for parts, labor, or transportation, any product proven to be defective in materials or workmanship under normal use and service. Seller shall have no obligation under this warranty or otherwise if the product is altered or improperly repaired or serviced by anyone other than Seller. In case of defect, contact the security professional who installed and maintains your security equipment or the Seller for product repair.

This one year Limited Warranty is in lieu of all other express warranties, obligations or liabilities. THERE ARE NO EXPRESS WARRANTIES WHICH EXTEND BEYOND THE FACE HEREOF. ANY IMPLIED WARRANTIES, OBLIGATIONS OR LIABILITIES MADE BY SELLER IN CONNECTION WITH THIS PRODUCT, INCLUDING ANY IMPLIED WARRANTY OF MERCHANTABILITY, OR FITNESS FOR A PARTICULAR PURPOSE OR OTHERWISE, ARE LIMITED IN DURATION TO A PERIOD OF ONE YEAR FROM THE DATE OF ORIGINAL PURCHASE. ANY ACTION OR BREACH OF ANY WARRANTY, INCLUDING BUT NOT LIMITED TO ANY IMPLIED WARRANTY OF MERCHANTABILITY, MUST BE BROUGHT WITHIN 18 MONTHS FROM DATE OF ORIGINAL PURCHASE. IN NO CASE SHALL SELLER BE LIABLE TO ANYONE FOR ANY CONSEQUENTIAL OR INCIDENTAL DAMAGES FOR BREACH OF THIS OR ANY OTHER WARRANTY, EXPRESS OR IMPLIED, OR UPON ANY OTHER BASIS OF LIABILITY, WHATSOEVER, EVEN THE LOSS OR DAMAGE IS CAUSED BY ITS OWN NEGLIGENCE OR FAULT. Some states do not allow limitation on how long an implied warranty lasts or the exclusion or limitation on how long an implied warranty lasts or the exclusion or limitation of incidental or consequential damages, so the above limitation or exclusion may not apply to you.

Seller does not represent that the product may not be compromised or circumvented; that the product will prevent any personal injury or property loss by burglary, robbery, fire or otherwise; or that the product will in all cases provide adequate warning or protection. Buyer understands that a properly installed and maintained alarm may only reduce the risk of a burglary, robbery, or fire or other events occurring without providing an alarm, but it is not insurance or a guarantee that such will not occur or that there will be no personal injury or property loss as a result. CONSEQUENTLY, SELLER SHALL HAVE NO LIABILITY FOR ANY PERSONAL INJURY, PROPERTY DAMAGE OR OTHER LOSS BASED ON A CLAIM THE PRODUCT FAILED TO GIVE WARNING. HOWEVER, IF SELLER IS HELD LIABLE, WHETHER DIRECTLY OR INDIRECTLY, FOR ANY LOSS OR DAMAGE ARISING UNDER THIS LIMITED WARRANTY OR OTHERWISE, REGARDLESS OF CAUSE OR ORIGIN, SELLER'S MAXIMUM LIABILITY SHALL NOT IN ANY CASE EXCEED THE PURCHASE PRICE OF THE PRODUCT, WHICH SHALL BE THE COMPLETE AND EXCLUSIVE REMEDY AGAINST SELLER. This warranty gives you specific legal rights, and you may also have other rights which vary from state to state. No increase or alteration, written or verbal, of the obligations of this Limited Warranty is authorized.
